Assignment 0311 Feedback

Carlos Agudo   *r2d32 / carlos.jorrillo@gmail.com*

http://my.cs.lmu.edu/~cagudo/ubuntu-kernel-howto.html

1a — With this assignment, you have cemented your ability to be productive at the command line. (**+**)

2a — Congratulations on successfully building an operating system kernel! (**+**)

2b — Your instructions provide the right information for adding a new system call to the kernel, but your patch file is missing the system call code and you have not included a demo program that shows off this system call. You need those files to seal the deal—particularly because the code in your tutorial is not entirely correct. The files would tell me if the incorrectness is due to a typo. (**/**)

4a — Missing code means a suboptimal proficiency here. (**/**)

4b — Not much to say about separation of concerns for this outcome so we consider this a "bye." (**+**)

4c — Not much code to write here, but all the more reason for it to be readable. The code on your tutorial page looks clean, but the actual code is missing. (**/**)

4d — You appear to have acquired the correct information needed to define a new system call and create a patch for it. If the files were complete, this would be a home run. (**|**)

4e — The single commit for the patch file is appropriate, and although not explicitly requested, you also committed your tutorial page work, which is good. But…a single commit for all that? Really? (**|**)

4f — Submitted not exactly on time, but close enough. (**+**)
